<b>Foreword</b>	<b>ix</b>
<b>Preface</b>	<b>xi</b>
<b>Acknowledgments</b>	<b>xiii</b>
<b>Authors</b>	<b>xv</b>
<b>1 An Introduction and Review of DNA Profile Interpretation</b>	<b>1</b>
1.1 A Very Basic Review of a DNA Profile	1
1.2 Thresholds	4
1.3 Mixture Interpretation	7
1.4 The Clayton Rules	7
1.5 CPI	11
1.6 RMP	12
1.7 A Three-Allele Example	13
1.8 Higher-Order and Complex Mixtures	15
1.9 Conclusion and the Case for Probabilistic Genotyping	15
<b>2 An Introduction to Statistics and Proposition Setting</b>	<b>17</b>
2.1 Probability	17
2.2 Derivation of Bayes' Theorem	21
2.3 Odds Form of Bayes' Theorem	23
2.4 Principles of Evidence Interpretation	23
2.5 Setting Propositions	24
2.6 The Likelihood Ratio	30
2.7 Representing the Weight of Evidence and the Verbal Scale	30
2.8 The Prosecutor and Defense Attorney's Fallacies	32
2.9 Conclusion	34
2.10 Practice Examples for the Reader	35
<b>3 Assigning the LR: Single-Source Examples and Population Genetic Models</b>	<b>37</b>
3.1 Population Parameters and Sampling Estimates	37

3.2	Heterozygote Single-Source LR	37
3.3	Homozygote Single-Source LR	39
3.4	Theory – Population Genetic Models	40
3.5	Product Rule	40
3.6	NRC II 4.1	41
3.7	NRC II 4.2 (Balding and Nichols Formulae)	42
3.8	Theory – Theta	44
3.9	Application of the Population Genetic Model to Single-Source Examples	45
3.10	Theory – Data below the Analytical Threshold (Dropout)	45
3.11	Drop-In	49
3.12	Full-Profile Example	50
3.13	Conclusion	52
3.14	Practice Examples for the Reader	52
<b>4</b>	<b>Application of the Binary LR for Mixtures</b>	<b>55</b>
4.1	Two-Person Mixture with Conditioning	55
4.2	Application of NRC II Recommendation 4.2 to Mixtures	58
4.3	Two-Person Mixture without Conditioning	62
4.4	Two-Person Resolvable Mixture	64
4.5	Two-Person Partially Resolvable Mixture	66
4.6	Two-Person Unresolvable Mixture	68
4.7	Two-Person Unresolvable Mixture (Alleles below ST)	72
4.8	Three-Person Mixture Example	75
4.9	Conclusion	78
4.10	Practice Examples for the Reader	79
<b>5</b>	<b>LRs Considering Relatives as Alternate Contributors</b>	<b>85</b>
5.1	Theory (Identity by Descent Coefficients)	85
5.2	Single-Source LR Examples: Heterozygote	87
5.3	Single-Source Examples: Homozygote	95
5.4	Mixed DNA Profile Example	96
5.5	Incorporating Subpopulation Correction	99
5.6	Conclusion	104
5.7	Practice Examples for the Reader	104
<b>6</b>	<b>Probabilistic Genotyping: Semicontinuous Models</b>	<b>107</b>
6.1	Probabilistic Methods of Interpretation	107
6.2	Underlying Concepts	108

Contents	vii
6.3 Nomenclature	109
6.4 Semicontinuous Methods: Single-Source Examples	110
6.5 Semicontinuous Methods: Mixture Example	122
6.6 Application of the Balding and Nichols Formulae	126
6.7 Conclusion	136
6.8 Practice Examples for the Reader	138
<b>7 Probabilistic Genotyping: Continuous Models</b>	<b>141</b>
7.1 Theory	141
7.2 Worked Examples	146
7.3 Conclusion	164
7.4 Practice Examples for the Reader	166
<b>8 Considerations on Validation of Probabilistic Genotyping Software</b>	<b>169</b>
8.1 SWGDAM and ISFG Recommendations	170
8.2 Specificity and Sensitivity Experiments	170
8.3 Precision	175
8.4 Effect of Changing the Number of Contributors	177
8.5 Effect of Varying Propositions	179
8.6 Conclusion	182
<b>Appendix 1: Allele Frequencies</b>	<b>185</b>
<b>Appendix 2: Model Answers</b>	<b>189</b>
<b>References</b>	<b>229</b>
<b>Index</b>	<b>237</b>
