Preface *xix*

1	What Is Forensic Systems Engineering?	1
1.1	Systems and Systems Engineering	1
1.2	Forensic Systems Engineering	2
	References	4
2	Contracts, Specifications, and Standards	7
2.1	General	7
2.2	The Contract	9
2.2.1	Considerations	9
2.2.2	Contract Review	10
2.3	Specifications	12
2.4	Standards	14
	Credits	16
	References	16
3	Management Systems	17
3.1	Management Standards	18
3.1.1	Operations and Good Business Practices	18
3.1.2	Attributes of Management Standards	18
3.2	Effective Management Systems	19
3.2.1	Malcolm Baldrige	19
3.2.2	Total Quality Management	20
3.2.3	Six Sigma	20
3.2.4	Lean	21
3.2.5	Production Part Approval Process	22
3.3	Performance and <i>Performance</i>	23
3.4	Addendum	23
	Credits	24
	References	24

4	Performance Management: ISO 9001	25
4.1	Background of ISO 9000	26
4.1.1	ISO 9001 in the United States	27
4.1.2	Structure of ISO 9000:2005	27
4.1.3	The Process Approach	28
4.2	Form and Substance	32
4.2.1	Reference Performance Standards	33
4.2.2	Forensics and the Paper Trail	34
	Credits	35
	References	35
5	The Materiality of Operations	37
5.1	Rationale for Financial Metrics	38
5.1.1	Sarbanes–Oxley	38
5.1.1.1	Title III: Corporate Responsibility	38
5.1.1.2	Title IV: Enhanced Financial Disclosures	39
5.1.2	Internal Control	39
5.1.3	The Materiality of Quality	41
5.2	Mapping Operations to Finance	41
5.2.1	The Liability of Quality	43
5.2.2	The Forensic View	44
	Credits	44
	References	44
6	Process Liability	47
6.1	Theory of Process Liability	48
6.1.1	Operations and Process Liability	50
6.1.2	Process Liability and Misfeasance	51
6.2	Process Liability and the Law	52
	Credits	52
	References	52
7	Forensic Analysis of Process Liability	55
7.1	Improper Manufacturing Operations	57
7.1.1	Verification and Validation	57
7.1.1.1	Nonstandard Design Procedures	57
7.1.1.2	Unverified or Unvalidated Design	58
7.1.1.3	Tests Waived by Management	58
7.1.1.4	Altered Test Procedures and Results	58
7.1.2	Resource Management	59
7.1.2.1	Unmonitored Outsourcing	59
7.1.2.2	Substandard Purchased Parts	60
7.1.2.3	Ghost Inventory	60

7.1.2.4	Ineffective Flow Down	61
7.1.3	Process Management	61
7.1.3.1	Forced Production	61
7.1.3.2	Abuse and Threats by Management	62
7.2	Management Responsibility	62
7.2.1	Effective Internal Controls	62
7.2.2	Business Standards of Care	63
7.2.3	Liability Risk Management	64
7.2.4	Employee Empowerment	65
7.2.5	Effective Management Review	65
7.2.6	Closed-Loop Processes	66
	References	67
8	Legal Trends to Process Liability	71
8.1	An Idea Whose Time Has Come	71
8.2	Some Court Actions Thus Far	72
8.2.1	QMS Certified Organizations	73
8.2.2	QMS Noncertified Organizations	74
	References	75
9	Process Stability and Capability	77
9.1	Process Stability	77
9.1.1	Stability and Stationarity	78
9.1.2	Stability Conditions	79
9.1.3	Stable Processes	80
9.1.4	Measuring Process Stability	82
9.2	Process Capability	83
9.2.1	Measuring Capability	83
9.2.2	A Limit of Process Capability	85
9.3	The Rare Event	85
9.3.1	Instability and the Rare Event	85
9.3.2	Identifying the Rare Event	86
9.4	Attribute Testing	87
	References	88
10	Forensic Issues in Product Reliability	91
10.1	Background in Product Reliability	91
10.2	Legal Issues in the Design of Reliability	94
10.2.1	Good Design Practices	95
10.2.2	Design Is Intrinsic to Manufacturing and Service	95
10.2.3	Intended Use	95
10.2.4	Paper Trail of Evidence	96
10.2.5	Reliability Is an Implied Design Requirement	97

10.3	Legal Issues in Measuring Reliability	97
10.3.1	Failure Modes	97
10.3.2	Estimation of MTTF	98
10.3.3	The More Failure Data the Better	99
10.3.4	The Paper Trail of Reliability Measurement	99
10.4	Legal Issues in Testing for Reliability	100
10.4.1	Defined and Documented Life Test Procedures	100
10.4.2	Life Test Records and Reports	101
10.4.3	Test Procedures	101
10.5	When Product Reliability Is not in the Contract	102
10.5.1	Product Liability	102
10.5.2	ISO 9001 and FAR	103
10.6	Warranty and Reliability	104
	References	105
11	Forensic View of Internal Control	107
11.1	Internal Controls	108
11.1.1	Purpose of Control	108
11.1.2	Control Defined	109
11.1.3	Control Elements in Operations	109
11.2	Control Stability	110
11.2.1	Model of a Continuous System	111
11.2.2	Transfer Functions	112
11.3	Implementing Controls	115
11.4	Control of Operations	117
11.4.1	Proportional (Gain) Control	118
11.4.2	Controlling the Effect of Change	119
11.4.2.1	Integral Control	120
11.4.2.2	Derivative (Rate) Control	121
11.4.3	Responsibility, Authority, and Accountability	121
	References	123
12	Case Study: Madelena Airframes Corporation	125
12.1	Background of the Case	126
12.2	Problem Description	127
12.2.1	MAC Policies and Procedures (Missile Production)	127
12.2.2	Missile Test	127
12.3	Examining the Evidence	128
12.3.1	Evidence: The Players	129
12.3.2	Evidence: E-mails	129
12.4	Depositions	132
12.4.1	Deposition of the General Manager	132
12.4.2	Deposition of the Senior Test Engineer	132
12.4.3	Deposition of the Production Manager	132

12.4.4	Deposition of the Chief Design Engineer	133
12.4.5	Deposition of the Test Programs Manager	133
12.5	Problem Analysis	133
12.5.1	Review of the Evidence	133
12.5.2	Nonconformities	134
12.5.2.1	Clause 7.3.1(b) Design and Development Planning	134
12.5.2.2	Clause 7.3.5 Design and Development Verification	135
12.5.2.3	Clause 7.3.6 Design and Development Validation	135
12.5.2.4	Clause 8.1 General Test Requirements	135
12.5.2.5	Clause 8.2.4 Monitoring and Measurement of Product	135
12.5.2.6	Clause 4.1 General QMS Requirements	135
12.5.2.7	Clause 5.6.1 General Management Review Requirements	135
12.6	Arriving at the Truth	136
12.7	Damages	137
12.7.1	Synthesis of Damages	137
12.7.2	Costs of Correction	137
	References	138
13	Examining Serially Dependent Processes	139
13.1	Serial Dependence: Causal Correlation	140
13.2	Properties of Serial Dependence	142
13.2.1	Work Station Definition	142
13.2.2	Assumptions	142
13.2.2.1	Assumption 1	143
13.2.2.2	Assumption 2	143
13.2.2.3	Assumption 3	143
13.2.3	Development of the Conditional Distribution	144
13.2.4	Process Stability	145
13.3	Serial Dependence: Noncausal Correlation	147
13.4	Forensic Systems Analysis	147
	Credits	148
	References	148
14	Measuring Operations	149
14.1	ISO 9000 as Internal Controls	151
14.2	QMS Characteristics	152
14.3	The QMS Forensic Model	154
14.3.1	Estimating Control Risk	155
14.3.2	Cost of Liability	156
14.4	The Forensic Lab and Operations	157
14.5	Conclusions	158
	Credits	159
	References	159

15	Stability Analysis of Dysfunctional Processes	161
15.1	Special Terms	162
15.1.1	Dysfunction	162
15.1.2	Common and Special Causes	163
15.1.3	Disturbances and Interventions	163
15.1.4	Cause and Effect	163
15.2	Literature Review	165
15.3	Question Before the Law	168
15.4	Process Stability	169
15.4.1	Internal Control	170
15.4.2	Mathematical Model for Correlation	170
15.5	Conclusions	173
	Credits	174
	References	174
16	Verification and Validation	179
16.1	Cause and Effect	180
16.1.1	An Historical View	180
16.1.2	Productivity versus Quality	182
16.2	What Is in a Name?	185
16.2.1	Verification and Validation Defined	186
16.2.2	Inspection and Test	187
16.2.3	Monitor and Measure	188
16.2.4	Subtle Transitions	189
16.3	The Forensic View of Measurement	190
16.3.1	Machine Tools and Tooling	190
16.3.2	Measurement	191
16.3.3	Control Charting	192
16.3.4	First Pass Yield	192
16.3.5	First Article Inspection	193
16.3.6	Tool Try	194
	References	194
17	Forensic Sampling of Internal Controls	197
17.1	Populations	198
17.1.1	Sample Population	199
17.1.2	Homogeneity	199
17.1.3	Population Size	200
17.1.4	One Hundred Percent Inspection	201
17.2	Sampling Plan	201
17.2.1	Objectives	201
17.2.2	Statistical and Nonstatistical Sampling	202
17.2.3	Fixed Size and Stop-or-Go	203

17.2.4	Sample Selection and Size	204
17.3	Attribute Sampling	204
17.3.1	Internal Control Sampling	204
17.3.2	Deviation Rates	206
17.3.2.1	Acceptable Deviation Rate	206
17.3.2.2	System Deviation Rate	207
17.3.3	Sampling Risks	207
17.3.3.1	Control Risk	207
17.3.3.2	Alpha and Beta Risks	208
17.3.4	Confidence Level	208
17.3.5	Evaluation	209
17.4	Forensic System Caveats	209
	References	210
18	Forensic Analysis of Supplier Control	211
18.1	Outsourcing	213
18.2	Supply Chain Management	215
18.3	Forensic Analysis of Supply Systems	216
18.3.1	Basic Principles of Supplier Control	216
18.3.2	The Forensic Challenge	216
18.3.2.1	Ensure that Purchased Units Conform to Contracted Specifications	217
18.3.2.2	Assessment of the Supplier Process	218
18.3.2.3	Tracking	218
18.3.2.4	Customer Relations	219
18.3.2.5	Verification and Storage of Supplies	221
18.3.2.6	Identification and Traceability	222
18.4	Supplier Verification: A Case Study	223
18.4.1	Manufacture	224
18.4.2	V50 Testing	224
18.4.3	V50 Test Results	226
18.5	Malfeasant Supply Systems	226
	References	227
19	Discovering System Nonconformity	229
19.1	Identifying Nonconformities	231
19.1.1	Reporting Nonconformities	232
19.1.2	Disputes	233
19.2	The Elements of Assessment	234
19.2.1	Measures of Performance	234
19.2.2	Considerations in Forensic Analysis of Systems	235
19.3	Forming Decisions	236
19.4	Describing Nonconformities	238

19.5	A Forensic View of Documented Information	240
19.5.1	Requirements in Documented Information	241
19.5.2	The Quality Manual	241
19.5.3	Documented Information Control	243
19.5.4	Records	244
	Acknowledgment	246
	References	246

Appendix A The Engineering Design Process: A Descriptive View 247

A.1	Design and Development	248
A.1.1	The Design Process	248
A.1.2	Customer Requirements	249
A.1.3	Interactive Design	249
A.1.4	Intermediate Testing	249
A.1.5	Final Iteration	251
A.2	Forensic Analysis of the Design Process	252
	References	253

Appendix B Introduction to Product Reliability 255

B.1	Reliability Characteristics	256
B.1.1	Reliability Metrics	256
B.1.2	Visual Life Cycle	257
B.2	Weibull Analysis	259
B.2.1	Distributions	259
B.2.2	Shape and Scale	260
B.2.2.1	Shape	260
B.2.2.2	Scale	262
B.2.3	The B-Percentile	262
B.3	Design for Reliability	263
B.4	Measuring Reliability	265
B.4.1	On Reliability Metrics	265
B.4.2	Graphing Failure Data	266
B.5	Testing for Reliability	269
	References	271

Appendix C Brief Review of Probability and Statistics 273

C.1	Measures of Location	274
C.1.1	Average: The Mean Value	274
C.1.2	Average: The Median	275
C.1.3	Average: The Mode	275
C.2	Measures of Dispersion	276
C.2.1	Variance	276
C.2.2	Range	276

C.3	Distributions	277
C.3.1	Continuous Distributions	277
C.3.2	Discrete Distributions	279
C.4	Tests of Hypotheses	281
C.4.1	Estimating Parametric Change	281
C.4.2	Confidence Level	284
C.5	Ordered Statistics	284
	References	285
Appendix D Sampling of Internal Control Systems		287
D.1	Populations	288
D.1.1	Sample Populations	289
D.1.2	Population Size	290
D.1.3	Homogeneity	290
D.2	Attribute Sampling	291
D.2.1	Acceptable Deviation Rate	292
D.2.2	System Deviation Rate	293
D.2.3	Controls	293
D.3	Sampling Risks	294
D.3.1	Control Risk	294
D.3.2	Consumer and Producer Risks	294
D.3.3	Alpha and Beta Errors	295
D.4	Sampling Analysis	297
D.4.1	Statistical Inference	297
D.4.2	Sample Distributions	298
D.4.3	Sample Size	299
D.4.4	Estimating the SDR	299
D.4.5	Confidence Interval	300
	References	302
Appendix E Statistical Sampling Plans		305
E.1	Fixed-Size Attribute Sampling Plan	306
E.1.1	Determine the Objectives	306
E.1.2	Define Attribute and Deviation Conditions	306
E.1.2.1	Acceptable Deviation Rate	306
E.1.2.2	System Deviation Rate	307
E.1.3	Define the Population	307
E.1.4	Determine the Method of Sample Selection	307
E.1.5	Determine the Sample Size	308
E.1.6	Perform the Sampling Plan	312
E.1.7	Evaluate Sample Results	312
E.2	Stop-or-Go Sampling	313
E.2.1	Acceptable Deviation Rate	313

- E.2.2 Sample Size 314
- E.2.3 Evaluation 316
- E.3 One Hundred Percent Inspection 316
- E.4 Application: An Attribute Sampling Plan 317
- References 318

Appendix F Nonstatistical Sampling Plans 321

- F.1 Sampling Format 322
 - F.1.1 Frame of the Sampling Plan 322
 - F.1.2 Attribute and Deviation Conditions 323
 - F.1.3 The Population 323
 - F.1.4 Nonstatistical Sample Selection 324
 - F.1.5 Sample Size 325
 - F.1.6 The Effect of Sample Size on Beta Error 326
 - F.1.7 Evaluating Sample Results 327
- F.2 Nonstatistical Estimations 327
- References 328
